Emerging technosciences like genetic engineering, neuropharmacology, AI, and space exploration create new forms of power that raise concerns about what it means to live a meaningful and just life. How can imagining the future on this and other worlds help us to grapple with the technoscientific matters of concern that confront us today? Together, we will explore this question by reading works of speculative science fiction through the analytic lenses of biopolitics, bioethics, and feminist theory, as well as by developing our own SF stories.

Course Prerequisite: Completion of Tier I Writing Requirement (e.g. LB 133)
Fulfills IAH Requirement
