LB 348 SUMMER SESSION A
ONLINE; synchronous times TBD
Faculty: Dr. Peter White

LB 348 is a 6-week internship in a professor's research program. This summer, the course is run by Dr. Peter White who does research on evolution and science education along with field research in moth and insect ecology. Students will conduct projects in one of those topic areas, though students who live in fossil-rich areas of the Midwest or Michigan may also have an option to conduct a fossil-hunting project based on finding and categorizing Cambrian-era fossils. This course is for students who would like a genuine biology research experience.

Course Prerequisites: LB 144/145, LB 119, LB 133 or equivalents
